

Web Security Assessment Report

Executive Summary: Automated Vulnerability Discovery

Total Vulnerabilities Identified: 6

Finding #1: SQLi

Severity	Critical
OWASP Category	A03:2021-Injection
CVSS Score	9.8
Target URL	http://testphp.vulnweb.com/listproducts.php?cat=2'

Payload: '

Remediation: Use parameterized queries and prepared statements. Sanitize all numerical and string inputs.

Finding #2: SQLi

Severity	Critical
OWASP Category	A03:2021-Injection
CVSS Score	9.8
Target URL	http://testphp.vulnweb.com/listproducts.php?cat=1'

Payload: '

Remediation: Use parameterized queries and prepared statements. Sanitize all numerical and string inputs.

Finding #3: XSS

Severity	High
OWASP Category	A03:2021-Injection
CVSS Score	6.1
Target URL	http://testphp.vulnweb.com/listproducts.php?cat=2"><script>alert(1)</script>

Payload: ">alert(1)

Remediation: Apply context-aware output encoding and implement a strict Content Security Policy (CSP).

Finding #4: XSS

Severity	High
----------	------

OWASP Category	A03:2021-Injection
CVSS Score	6.1
Target URL	http://testphp.vulnweb.com/listproducts.php?cat=1"><script>alert(1)</script>

Payload: ">alert(1)

Remediation: Apply context-aware output encoding and implement a strict Content Security Policy (CSP).

Finding #5: CommandInjection

Severity	Critical
OWASP Category	A03:2021-Injection
CVSS Score	10.0
Target URL	http://testphp.vulnweb.com/listproducts.php?cat=2/; echo VULN_CHECK

Payload: ; echo VULN_CHECK

Remediation: Avoid using shell execution functions. If necessary, use a fixed list of arguments or an API-based alternative.

Finding #6: CommandInjection

Severity	Critical
OWASP Category	A03:2021-Injection
CVSS Score	10.0
Target URL	http://testphp.vulnweb.com/listproducts.php?cat=1/; echo VULN_CHECK

Payload: ; echo VULN_CHECK

Remediation: Avoid using shell execution functions. If necessary, use a fixed list of arguments or an API-based alternative.
